

FOR IMMEDIATE RELEASE

New Slim Rod Cutting System Yields Faster Cuts with Lower Kerf

Colorado Springs, CO – July 30, 2008 – Diamond Wire Technology introduces their Slim Rod Cutting System that makes it possible to cut filaments in a single pass. With two independent cutting yokes and a tangential cutting system, The SR200 saw yields faster cuts and improved cutting performance

The SR200 Filament Saw cuts filaments up to 150 mm in diameter and 3200 mm long into 7mm x 7mm rods in one cycle. With this saw, customers are able to produce up to 100% more rods than with a blade process. Cutting in one cycle maximizes production tenfold with less kerf and a precision process.

The SR200 saw offers ease of use for any operator, with state-of-the-art electronics and a Windows PC based operator interface. 'Smart' servo motors offer precise wire control and an optional Ethernet interface gives the user an ability to remotely program and monitor status.

Diamond Wire Technology's Slim Rod Cutting System offers low kerf combined with a fast cutting speed, making it possible to produce more than 360 filaments per day on 120 mm rods.

Diamond Wire Technology's extensive team of design, electrical and software engineers has developed a line of products that will enhance performance and lower costs. These saws combine diamond wire and a patented tangential cutting process to provide radical new cutting solutions for a broad range of applications and needs.

About Diamond Wire Technology:

Diamond Wire Technology is the originator and market leader in diamond wire cutting. The company is the oldest manufacturer of diamond wire and diamond wire saws, with over 40 years experience. In addition to making diamond wire from 150 micron to 500 micron in diameter, Diamond Wire Technology maintains a line of diamond wire saws designed to enhance performance and lower cost.
